What we build is
the answer to a
question someone
asked us.

SnapCab designs tailored acoustic rooms. The work is done by a team built around three values, in this order: be kind, be authentic, be useful. Everything in this catalog follows from that.

TAILORED ACOUSTIC ROOMS

Two factories. Forty years.

Every room in this catalog began as someone's idea. The size, the finish, the function, the acoustics, all specified by the person who imagined it, then engineered to that spec in Pennsylvania and Ontario. Two factories. Forty years between them.

Left, Glenn Bostock in his woodshop in 1990.

What forty years has taught me.

I started as a fine woodworker. In 1983 I opened my own shop for architectural furniture and interiors. The work I loved was work that solved a real human need.

That work led to elevator interiors. I patented a modular paneling system that turned a four-day install into a one-day install, and the shop grew into SnapCab. Years later, architects and designers came to us with a different problem: they needed acoustic rooms inside open offices, specified to a plan and installed without months of construction. The modular thinking carried directly. The tailored acoustic room you see in this catalog is what that became.

What I did not know in 1983, and what over forty years of building this company has taught me, is that the product is secondary. What mattered was building *A Human Business*. One that puts people first. The people doing

the building. The people the building is for. A business, if you do it right, is a community of people trying to be useful and working towards a common goal.

The rooms we manufacture are evidence. The people we hire are evidence. The choice to keep our factories in North America when offshore would be cheaper is evidence too.

Be kind. Be authentic. Be useful. Three values, in that order. The room you specify is the work of the people at SnapCab who share them.

A handwritten signature in black ink, reading "Glenn H. Bostock". The signature is fluid and cursive, with the first letters of each word being capitalized and prominent.

Glenn H. Bostock, Founder and CEO of SnapCab

PURPOSE BUILT

Built for you.

Every SnapCab room begins as a brief from a designer and becomes a manufactured commission. Four pillars define what we can build.

Any Dimension

Phone booths. Focus rooms. Meeting rooms. Conference suites. Any footprint your plan calls for, we engineer to it.

Any Finish

Wood. Stone. Acoustic felts. Architectural glass. Custom printed surfaces. If you can specify it, we can finish in it.

Any Interior

Tables. Seating. Monitor mounts. Power placement. Lighting. AV integration. Every interior element designed around actual use.

Any Purpose

Recording studios. Clinical suites. Lactation rooms. Sensory rooms. Remand booths. If you have a need, we build the solution.

Bespoke finishes. Seamless integration.

Every visible surface is yours to specify. Wood. Stone. Acoustic felts. Architectural glass. Custom printed surfaces. COM accepted across all categories. If you can specify it, we can finish in it.

“

SnapCab allowed us to select finishes that coordinated well with the existing space, making the rooms a part of the overall office design and not looking like an afterthought.

— TPG ARCHITECTURE, NEW YORK

BUILT TO SPEC

Every layer, configurable.

Every layer of a SnapCab room is engineered to specification. The opposite page lists what's specifiable as standard. Anything not listed, we'll quote on request.

Frame

Extruded aluminum. Anodized, powder-coated, or PVDF-coated. Custom RAL color match available.

Wall Panels

Each wall panel can be independently specified.

- Laminates
- Wood veneers
- Stone veneers
- PET acoustic felts
- Whiteboards
- Architectural glass
- Custom graphics

Ceiling

Integrated acoustic treatment standard. Enhanced and Premium acoustic packages add absorptive ceiling treatment to your acoustic spec.

Furniture

Made to order seating, conference tables, height-adjustable desks. Client-supplied furniture accepted.

Flooring

Commercial-grade carpet tile, luxury vinyl tile, linoleum, sheet vinyl. COM accepted across all categories.

Lighting

Integrated dimmable LED standard at 3500K. Color temperature specifiable from 2700K to 5000K. Integrated in-wall face lighting available. Client-specified lighting accepted.

Door & Exterior Glass

Clear tempered. Low-iron clear. Frosted (acid-etched or sandblasted). Switchable electrochromic. Custom printed and branded.

Technology

Built to support your AV, video conferencing, and integrated tech specifications.

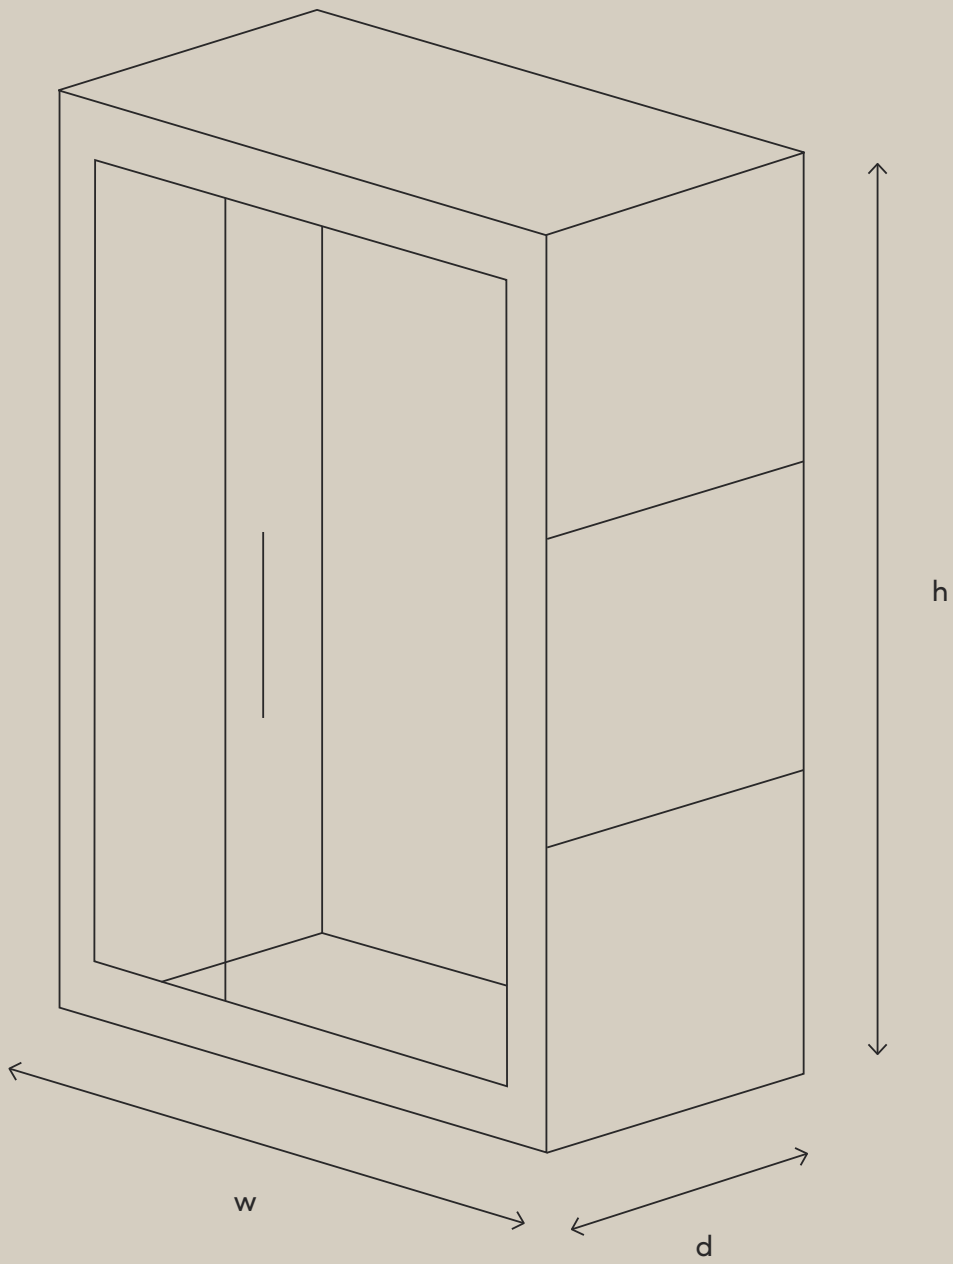

SIZED TO YOUR FLOOR PLAN

Dimensions built to fit your space.

Give us the floor plan and the ceiling height. We engineer the room to fit. The footprint is the brief. The narrowest room we've built measured 33 inches wide. The largest was a 96 inch conference suite.

BEGIN THE SPECIFICATION

FOR THE DESIGN PROFESSIONAL

For architects and designers.

Specified, Not Selected

Every SnapCab room is engineered to the brief. Not chosen from a configurator. Specify the size, the finish, the interior, the acoustic target. We engineer to match.

Acoustics, Engineered and Verified

STC 35+ packages engineered up to STC 54+ for legal, government, healthcare, music, and broadcast environments. Performance independently tested.

Modular That Actually Evolves

Upgrade. Reconfigure. Relocate. Built for change. Built to last.

Support That Stays With You

10-year warranty. Local service. A partner that's here for the long haul.

Sustainable by Construction

Low-waste production. Durable construction. Long-term usability. The most sustainable acoustic room is the one that's still working in fifteen years.

Visit the Factory

Both SnapCab factories welcome designer visits. Walk the production floor in Warrington or Kingston. Meet the people who'll build your room. Or take a virtual tour. Ask your specialist to arrange either.

ACOUSTICALLY TESTED AND VERIFIED

Acoustics engineered to your environment.

Sound privacy is the precondition for honest conversation. Needs vary by environment, and SnapCab provides tailored sound packages to deliver the privacy each space requires. Standard packages cover the range of typical commercial specification. Custom packages are engineered to specification. All packages independently tested and verified. NIC ratings available on request.

Standard *STC.35+*

Recommended for open-plan offices, focus rooms, and most general-purpose installations. The standard package is included on every SnapCab room.

Enhanced *STC.45+*

For confidential conversations, including legal consultations, healthcare assessments, executive offices, HR rooms.

Premium *STC.54+*

For high-security and high-performance environments: government, justice, music recording, broadcast, and any specification requiring near-construction-grade acoustic isolation.

CRAFTED QUALITY

Built to Last.

A SnapCab room is built to be the last one you specify. The frame is structural. The wall panels come off. The acoustics, the lighting, the technology, the seating. All upgradable as the space around it changes.

Structural

- ✓ Heavy-gauge aluminum frames
- ✓ Tempered safety glass
- ✓ Double-sealed sound-dampening door
- ✓ High-load phenolic casters

Serviceable

- ✓ Updatable wall panels
- ✓ 10-year structural warranty
- ✓ North American manufactured

INDUSTRY SECTORS

Tailored to sector-specific environments.

Corporate
Healthcare
Education

Retail & Hospitality
Government & Public Sector
Manufacturing & Warehouses

The six sectors above represent where SnapCab has done the deepest work. The principle extends to podcast studios, financial institutions, music recording, sensory rooms, and justice infrastructure. If your sector isn't shown, ask. We've likely built for it.

INSIDE THE OPEN OFFICE

Corporate Offices

Open-concept offices traded privacy for flexibility. SnapCab gives both back. Sound-insulated rooms for hybrid meetings, confidential conversations, focused work, and content creation. Dropped into the floor plan without renovation. Specified by companies like Fractal Workspace, CAA, Seaveas, and Tourism Kingston, among others. The acoustic privacy of a closed office, with the spatial economy of an open one.

- ✓ Custom finishes and acoustic packages
- ✓ Built to your specifications
- ✓ Customizable dimensions
- ✓ Lighting, ventilation, and furniture options
- ✓ Environment-specific custom sound packages
- ✓ ADA-compliant configurations available
- ✓ Easy to relocate and reconfigure

Use cases: focused work, calls, team meetings, and content creation

WHERE PRIVACY IS CLINICAL

Healthcare

A hospital needs public and private spaces in fine-grained measure. Conversations about diagnoses happen beside corridor traffic; sensitive consultations behind thin partitions. SnapCab builds the private interventions that go where they're needed – telehealth suites, behavioral health consultations, lactation support, and the SnapCab Care assessment pods deployed at Kingston Health Sciences Centre during the COVID-19 pandemic. With pediatric installations at a major U.S. children's hospital. Compliance, not convenience: materials that withstand sanitation, ventilation that meets healthcare requirements, privacy treated as a legal mandate.

- ✓ Built to your specifications
- ✓ Anti-microbial finish options and integrated HEPA filtration
- ✓ HIPAA-friendly layouts and acoustic privacy
- ✓ Medical-grade materials, easy to sanitize between uses
- ✓ ADA-compliant configurations available

Use cases: telehealth, provider calls, family consultations, staff respite, lactation, assessment

FOR LEARNING ENVIRONMENTS

Education

Open classrooms promote collaboration, but they can overwhelm students experiencing sensory sensitivities. SnapCab builds spaces inside the classroom that are flexible enough to avoid stigmatization, specific enough to support those who need them most. Quiet study nooks, speech therapy spaces, sensory regulation rooms, and the calmly lit acoustic environments that allow a student in overload to reset without drawing attention. Installed in research and study spaces at two of North America's top research universities, and in K-12 environments where inclusive design matters most.

- ✓ Built to your specifications
- ✓ Sensory-friendly options and sound-dampened interiors
- ✓ Safe, tamper-resistant, and easy to clean
- ✓ ADA-compliant configurations available
- ✓ Easy to relocate as needs change

Use cases: libraries, testing, OT/speech sessions, music practice, sensory rooms

FOR GUEST-FACING SPACES

Retail & Hospitality

Present-day commerce competes on user experience, not just inventory. Hotels, retail floors, and event spaces need privacy that looks like part of the design. SnapCab builds branded, beautifully finished rooms for hotel lobby phone booths, retail consultation spaces, business centers, co-working amenities, and private styling consultations. Premium finishes, custom graphics, no permits, no construction dust.

- ✓ Built to your specifications
- ✓ Premium finishes and custom branded exteriors
- ✓ Lighting, ventilation, and furniture options
- ✓ ADA-compliant configurations available
- ✓ Easy to relocate and reconfigure as the floor evolves

Use cases: hotel lobbies, business centers, retail consultations, co-working amenities, event spaces

Government & Public Sector

Government facilities serve the public, the staff, and in some cases people in custody. Each has different privacy, security, and accessibility requirements. In courthouses, sensitive conversations happen in corridors and on entry steps. In correctional facilities, transporting people in custody to court hearings is expensive, labor-intensive, and weather-dependent. SnapCab builds for all of it: citizen service rooms at government offices, court-adjacent consultation spaces, library quiet rooms, and SnapCab Secure video remand booths in active service across Ontario police stations and correctional facilities. Some jurisdictions have reported savings exceeding 90% compared to traditional prisoner transport.

- ✓ Built to your specifications
- ✓ Anti-tamper hardware and durable construction available
- ✓ ADA-compliant configurations available

- ✓ Detention-grade options
- ✓ Easy to relocate and reconfigure

Use cases: citizen services, library quiet rooms, jury privacy, legal consultations, video remand

FOR THE INDUSTRIAL FLOOR

Manufacturing & Warehouses

Factories, warehouses, and fulfillment centers are loud, dusty, and constantly in motion. SnapCab builds rooms quiet enough to live in that environment and quiet enough to actually use. For HR conversations, safety briefings, supervisor offices, and operations planning. Specified by Almag, Rocky Mountain Aircraft, and one of North America's largest e-commerce fulfillment operators, where private acoustically controlled spaces were needed inside loud warehouses.

- ✓ Built to your specifications
- ✓ Noise-reduction panels rated for loud environments
- ✓ Dust- and vibration-resistant construction
- ✓ Modular components for easy repair and replacement
- ✓ Heavy-duty casters for relocation across the floor

Use cases: supervisor offices, operations planning, training rooms, HR conversations, safety briefings

Track

Track

Sustainability

The most sustainable acoustic room is the one that's still working in fifteen years.

SnapCab rooms are built to last. Heavy-gauge aluminum frames with significant recycled content. PET acoustic felt made from recycled plastic bottles. Tempered glass that can be melted down and remolded. Wood from certified forests, finished with low-VOC sealants. Each component sourced, specified, and assembled to be replaceable.

Modularity is the longer argument. A SnapCab room installed today doesn't need to remain fixed in its original configuration. Panels swap. Glass swaps. Fabric swaps. Lighting and AV upgrade with the technology. Only what needs to change, changes. The structural frame stays. The room stays in service.

At end of life, the same modularity that kept the room useful keeps the materials out of the waste stream. Metal recycles. Glass remelts. Acoustic panels repurpose. Wood reclaims. The room comes apart the way it was put together.

We ship partially assembled to reduce crating, plastic packaging, and fuel emissions. We manufacture in two North American factories to keep the supply chain short. We work with vendors who can show us their own work.

CERTIFIED AND TESTED

Safety

A SnapCab room is a space someone sits in alone, with the door closed. We engineer for that. UL Listed, seismic certified, fire-rated, CARB Phase II compliant, air quality tested, independently verified. The peace of mind that comes from knowing the room was built for the condition it's used in.

- ✓ Fire safety solution
- ✓ UL certification
- ✓ Seismic certified
- ✓ CARB Phase II compliant
- ✓ Safety break-away glass

Standard Elements

- 1 Motion Sensor**
Activates fans and lighting
- 2 Safety Break-Away Glass Front**
- 3 Diffused, dimmable LED Perimeter Lighting**
- 4 Heavy-Gauge Aluminum Sub-Structure**
- 5 Door**
3/8" tempered glass, fully framed, with double acoustic seals. The door can be ordered as left-hand or right-hand swing and comes with an 18" tall door pull.
- 6 Power Bar**
Mountable power bar with (2) 110V outlets and (2) USB-A & (2) USB-C outlets.
- 7 Power Cord**
Plug and play design with a 6' long cord that plugs into a standard outlet. Each plug has a built-in circuit breaker with reset.
- 8 High-load Phenolic Casters**
Made for easy relocation.

User Lighting

Our standard soft LED perimeter lighting fosters a calm, focused environment and enhances user comfort by replacing the harsh overhead lighting that often creates unflattering shadows and visual strain. Clients can also specify dimmable in-wall face lighting for content recording and video calls.

CASE STUDIES

Client Projects

Fractal Workspace

Fractal Workspace specified custom acoustic rooms across their open-plan office, including single-user rooms for video, smaller-format rooms for individual work, and four-person rooms for collaborative meetings. The rooms gave members of the workspace access to focused work, confidential conversation, and meeting space without the constraints of conventional offices.

The rooms are among the most-requested spaces in the facility.

- ✓ Custom Finishes
- ✓ Face Lighting

Glenn and his team were
amazing to work with. We use
SnapCab pods in our open office
spaces and our members love it!

— DAVID ROBINSON, FOUNDER OF FRACTAL COWORKING

CASE STUDY

CAA North & Eastern Ontario

To address the challenges of their open-concept office in Lansdowne, CAA North & Eastern Ontario partnered with SnapCab to give employees space for focused work and confidential conversation.

The project specified custom configurations across the headquarters, including single-user rooms for individual work, two-person rooms for confidential conversation, and a series of rooms engineered to fit beneath the building's existing staircases. The modular system integrated with the residential-grade carpets and warm finishes throughout.

The rooms became the most-used spaces on the floorplate within days of installation.

✓ Custom Finishes ✓ Podcasting ✓ Video Conferencing

“

We had this big space with stairs and lots of glass and people didn't sit here, and we couldn't figure out why. All of a sudden we put the SnapCabs in, and people start sitting in them and working in them.

— JEFF WALKER, PRESIDENT & CEO CAA NORTH & EASTERN ONTARIO

Communities of Usefulness in Built Form

In March 2020, as a COVID-19 response, SnapCab redirected the factory floor to build medical assessment rooms for Kingston Health Sciences Centre.

Engineered from the existing modular system but adapted for clinical use, the rooms provided HEPA filtration, soundproof acoustic isolation, one-way visual privacy for patients, and the capacity to accommodate gurneys and medical equipment. The deployment was recognized by Fast Company's 2021 World Changing Ideas Awards.

The work began as a response to a need. We continue to manufacture clinical-use rooms across North America.

SPREAD LOVE
not germs

“

This pod has enhanced our ability to provide high quality care to patients presenting to the COVID-19 Assessment Centre, the kids love the design!

– KHSC TESTING CENTRE

Video Remand Booths

SnapCab Secure was engineered to address a logistical and safety problem in the Canadian justice system: people in custody being transported over significant distances for remand hearings that could be conducted remotely.

Each unit combines reinforced steel construction with STC 54+ sound isolation, integrated video conferencing systems, and a one-day on-site installation that minimizes disruption to operational facilities. The booths are deployed in correctional facilities and police stations across Ontario.

Per-hearing transportation and security are reduced substantially when hearings happen on-site. Hearings happen on time. The system works the way it was designed to work.

CASE STUDY

Nurture Pod

The Nurture provides a private, secure space for nursing mothers returning to work. Most workplaces still do not offer one.

The room includes a lockable door with occupancy indicator, opaque privacy glass, hand sanitizer, a coat hook, a shelf for personal belongings, and a mirror. The interior is acoustically isolated for confidential phone calls during use and engineered for sanitization between users across a workday.

Nurture is specified in corporate, healthcare, education, and government settings across North America.

Damage caused by misuse of products will not be covered under these warranties. The term "misuse" may include, but is not limited to, altering components in any way (e.g., drilling holes, installing mounting brackets or hangers) or improper cleaning procedures (e.g., using cleaners strong enough to damage material finishes).

Resources for you

2D and 3D files, specification sheets, finish samples, and acoustic data, available to download. Scan the code or ask your specialist to send the files you need.

OUR SERVICE COMMITMENTS

We build rooms.
What we create
are relationships.

For forty years, SnapCab has been the kind of company a designer can call when something is unclear, the client changed their mind, or the install is happening tomorrow and a question came up overnight. The product is one part of the work. The relationship is the other.

Quotes in 24 hours.

Most standard quotes come back the same day. Custom configurations within 24 hours. Itemized so you can defend every line to your client.

A named specialist on every project.

One person at SnapCab, from the first call through install. Their name and direct line are in your file. No call centers. No handoffs between phases.

Lead times you can promise.

We publish current lead times by product line. Your specialist tells you what's in stock, what's at four weeks, what's at twelve. The date we give you is a date you can give your client.

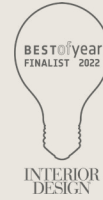

Material suggestions to keep your timeline.

If a finish would extend the lead time, we'll tell you and recommend alternatives that hit your spec. Your client's deadline is the brief.

Pre-installation coordination with your installer.

We meet with your installation company before site arrival. Drawings reviewed, sequence confirmed, problems caught early. The install goes the way the install is supposed to go.
