DETENTION-GRADE MODULAR ROOMS

SnapCab Secure

Detention-grade video remand booths for corrections
and justice facilities — engineered for security, sound
privacy, and rapid deployment.

SNAPCAB SECURE

ABOUT SNAPCAB

Four decades of architectural interior systems.

SnapCab has spent over 40 years designing and manufacturing architectural interior systems for environments that demand precision and reliability. What started in 1983 as founder Glenn Bostock's woodworking shop became a patented modular building system, manufactured today across two North American factories, including our Warrington, Pennsylvania facility.

That experience spans Fortune 500 clients, public institutions, and — increasingly — the correctional and judicial facilities that operate under some of the most demanding standards in the built environment. SnapCab Secure booths are in active service in correctional facilities and police stations, where jurisdictions have reported transport-cost reductions exceeding 90%.

We tailor our building systems to create useful, flexible solutions for our clients, leading with the company's core values of being kind, authentic, and useful, in what we call A Human Business.

BUILT FOR WHAT'S AT STAKE

Security and dignity are not a trade-off.

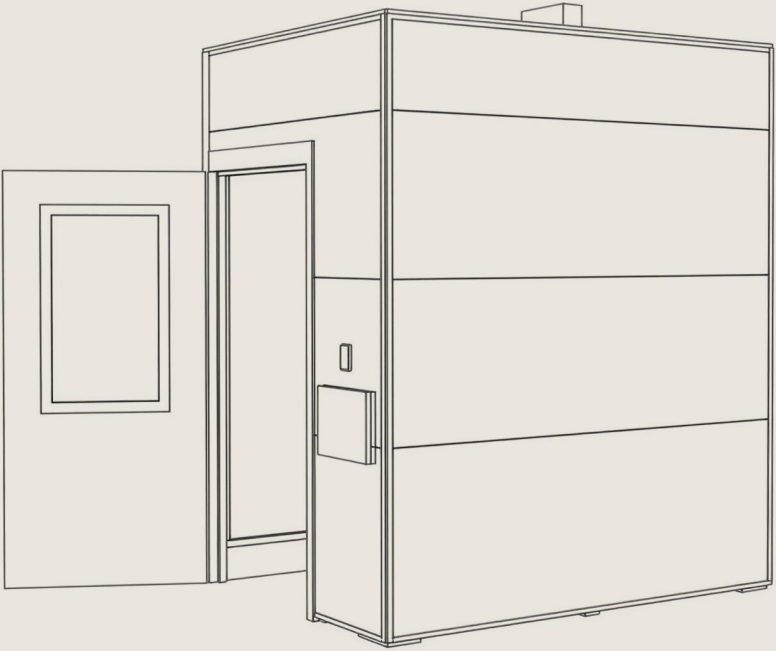

Correctional facilities and courts operate under some of the most demanding requirements in the built environment — detention-grade durability, uncompromising confidentiality, and zero tolerance for delay.

SnapCab Secure was developed alongside corrections and justice professionals to meet that standard, in a modular system that installs in days, not months.

SNAPCAB SECURE

96%

COST REDUCTION

Estimated savings in inmate transport costs when hearings are conducted virtually on-site

2 Day

INSTALLATION

The typical installation, saving months of permitted hard-wall build-out

Level 1

HOLDING CELL

Holding cell construction built into every unit for safety and security

Minimizing cost, risk, and delay.

Moving individuals in custody to and from court is expensive, resource-intensive, and exposes staff, officers, and the public to risk. Facilities and court systems are under growing pressure to deliver timely, secure hearings without expanding transport budgets or backlogged dockets.

Reduce Delays & Backlog

On-site virtual court booths help hearings proceed on schedule, without waiting on transport logistics, escort availability, or weather and traffic disruptions.

Improved Access to Counsel

A dedicated, soundproof, on-demand space gives individuals in custody reliable, confidential access to legal representation, closer to where they're held.

A secure room system.

Developed in collaboration with corrections and justice professionals, SnapCab Secure is engineered to meet the stringent demands of correctional and court-adjacent environments.

01 Secure

Level 1 holding cell standards with steel-clad construction, detention-grade locks, anti-ligature hardware, and tamper-proof fixtures and fasteners throughout.

02 Soundproof

Wall and ceiling assemblies rated to 54 STC, delivering high sound privacy for confidential legal consultations and remote testimony.

03 UL 962 listed

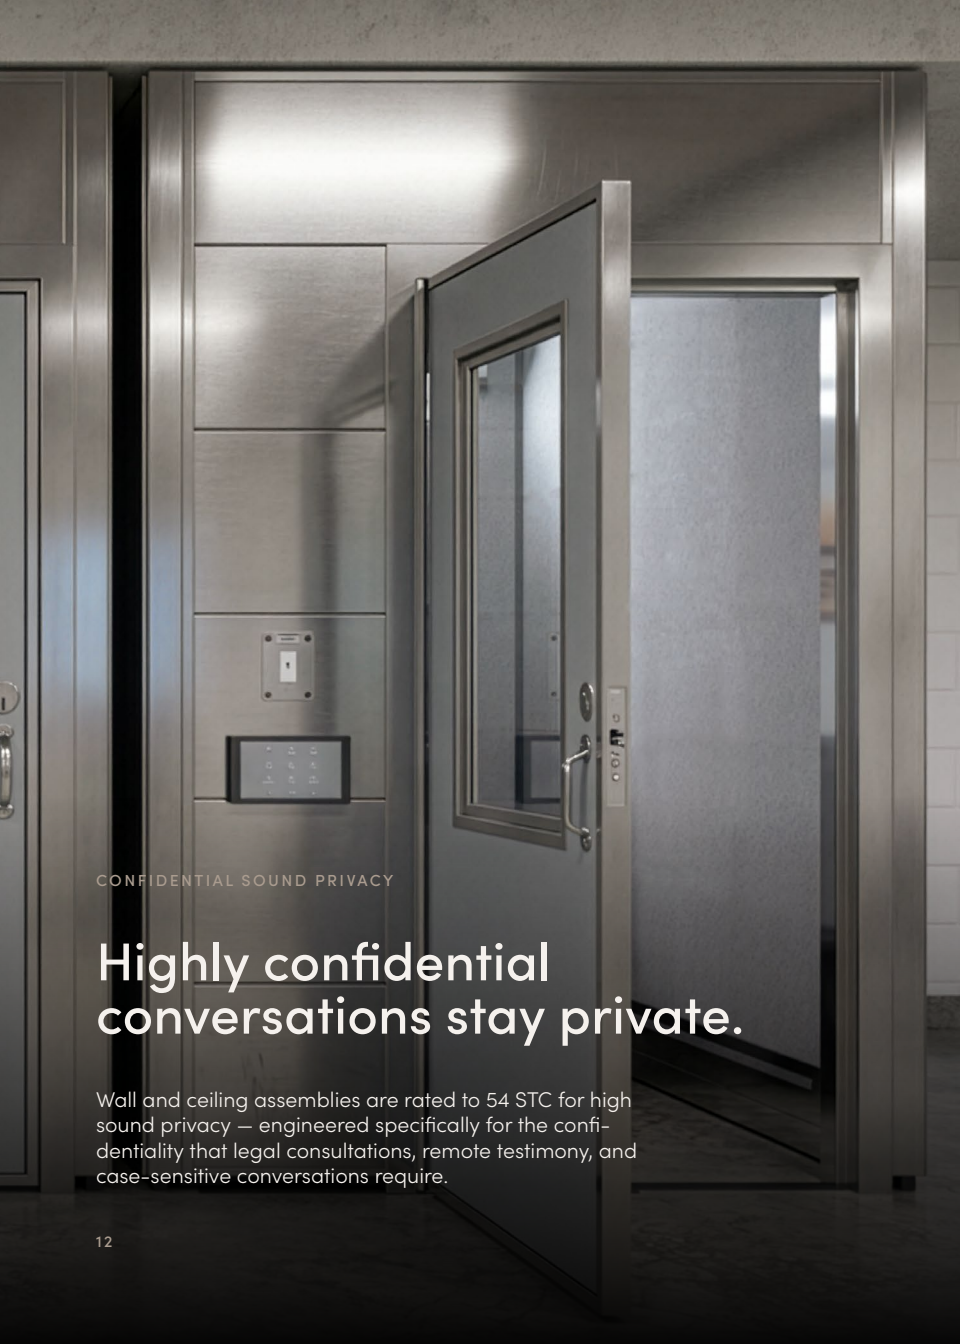

Factory-certified electrical assembly — walls, ceilings, ventilation, and lighting that goes beyond a wiring harness and eliminates the need for building permits.

04 Cost-effective

Modular and relocatable, with no permanent construction or costly future retrofits, and installation within two days to minimize operational disruption.

SNAPCAB SECURE

CONFIDENTIAL SOUND PRIVACY

Highly confidential conversations stay private.

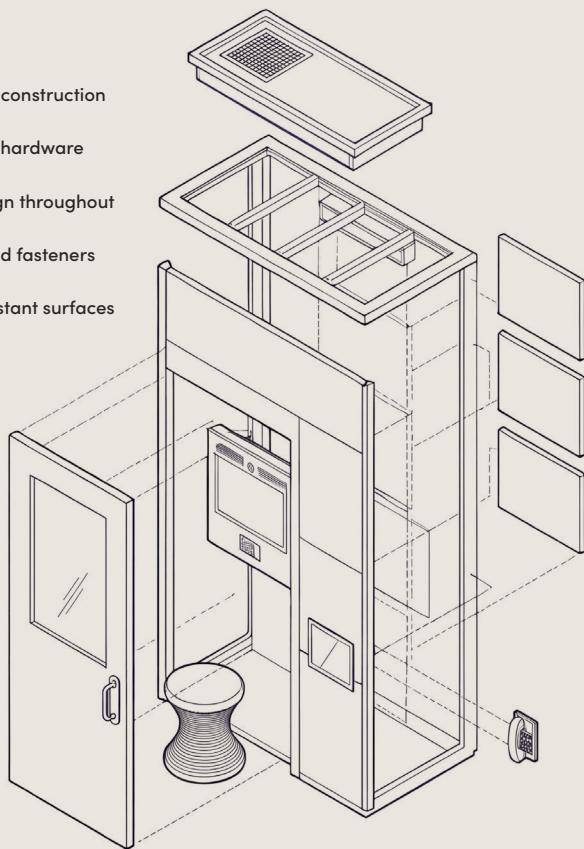

Wall and ceiling assemblies are rated to 54 STC for high sound privacy — engineered specifically for the confidentiality that legal consultations, remote testimony, and case-sensitive conversations require.

DETENTION-GRADE SECURITY

Built to the same standard as the facility around it.

SnapCab Secure booths meet Level 1 holding cell standards — engineered so the booth never becomes the weak point in an otherwise secure environment.

- ✓ Steel-clad wall and door construction
- ✓ Detention-grade locking hardware
- ✓ Safety anti-ligature design throughout
- ✓ Tamper-proof fixtures and fasteners
- ✓ Impact- and vandal-resistant surfaces

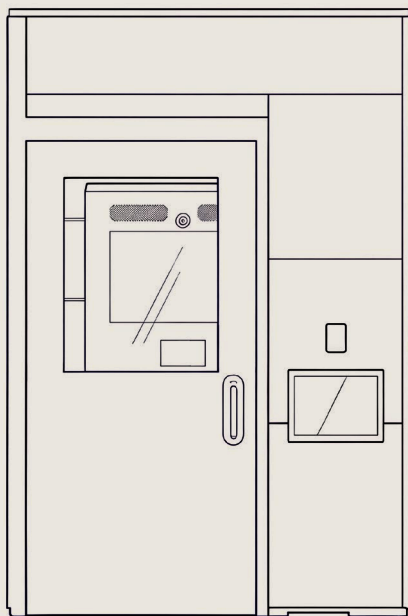

TAILORED TO SPEC

Built to your facility's exact requirements.

SnapCab Secure can be tailored to your facility's specific requirements.

SECURITY	ACOUSTICS	CERTIFICATION
Construction	Wall / Ceiling Rating	Electrical Assembly
Steel-clad, Level 1 holding cell standard	54 STC	UL 962 Listed
Hardware	Sound Package	Installation
